

MANUAL GUIDE

# Smart garden 3

**plantui**

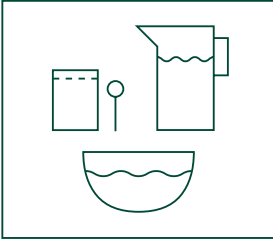

## PARTS

**P1** LIGHT HAT **P2** HEIGHT BLOCK **P3** LOCK UNIT **P4** WATER PUMP  
**P5** PLANT TRAY **P6** WATER TRAY **P7** WATER BOWL

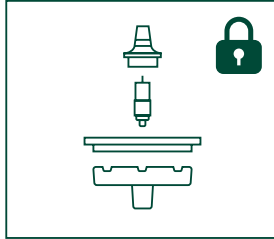

## SETTING UP

①

Add 1 liter of water with 1 spoonful of nutrients to the water bowl. The pump will take care of the mixing.

②

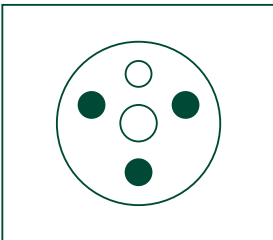

Make sure that the pre-assembled center part (**P3, P4, P5 and P6**) is firmly locked. Then place into the water bowl.

③

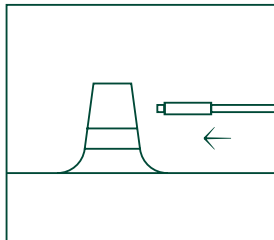

Separate each capsule using scissors and remove the center label. Make sure that the seeds don't fall out and are not attached to the label.

④

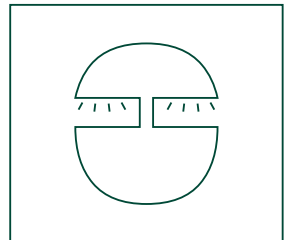

Place the capsules in all empty holes in the plant tray. Don't fill the 4th hole, which is a watering hole.

⑤

Plug in the device with the Plantui charger.

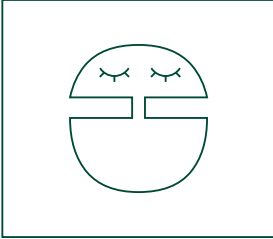

⑥

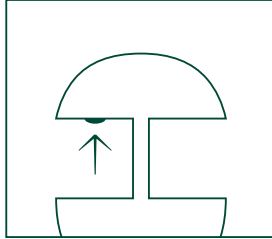

Put on the light hat without a height block. Pink light turns on, the germination phase has begun.

# TAKING CARE

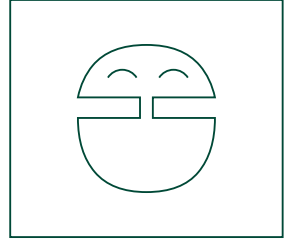

## SETTING THE SLEEP / AWAKE MODE

Plantui Smart Gardens sleep 10 hours daily. They will go automatically to sleep after 14 hours from turning it on.

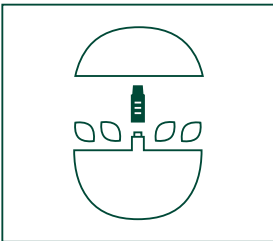

Set the sleep timer by holding the button under the light unit for 3 s. Lights will blink 2 times and then turn off.

The device will wake up after 10 hours and keep this rhythm if you don't change it.

---

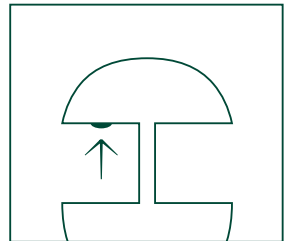

## LIVING WITH YOUR PLANTS

Add the first height block when the first leaves appear. Add the second height block before the leaves touch the light hat.

You can start using the plants when they are big enough. Instructions and harvest times can be found at [plantui.com](https://plantui.com).

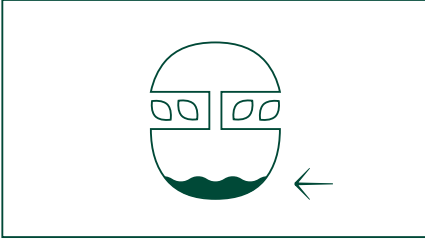

To temporarily turn off the light, press the button under the light unit. It will stay off until its set wake up time. Press again to turn the light back on.

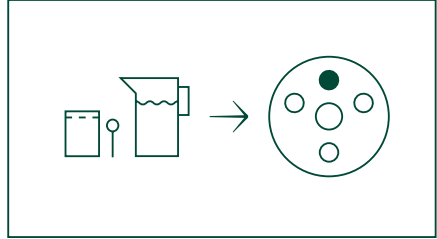

To reboot your garden, unplug it for 3 minutes. The pump and light will immediately start when reconnected. The light will now be on for 14 h and keep this rhythm.

# TAKING CARE

## ADD WATER AND NUTRIENTS

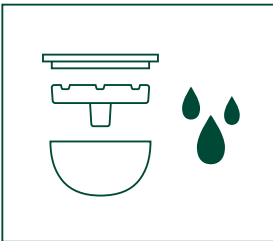

If the pump starts being noisy the water level is too low. You can check the water level by lifting up the center part (**P3, P4, P5 and P6**). When the water has run out the light will start flashing.

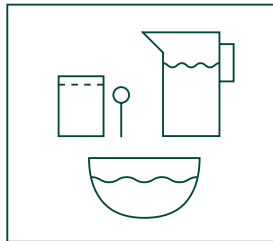

Add 1 spoonful of Plantui nutrients to the water hole then slowly pour 1 liter of water in the hole. The pump will take care of mixing the nutrients.

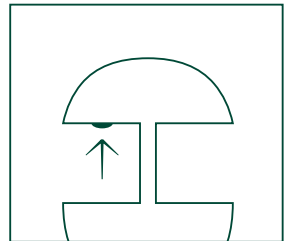

## CLEANING YOUR DEVICE

Wash the water bowl, plant tray and water tray with water (max 55°C) after each crop. You can wash them by hand or in the dishwasher. Do not wash the electrical parts.

Clean the calcium deposit with citric acid: add 1 tablespoon of citric acid and 1 liter of warm water (max 55°C).

Hold the button under the light hat for 15 s until the light turns blue-green, the pump will turn on and operate for 2.5 min. Leave it to soak for a few hours, then clean it properly before use.
